

## ABSTRACT OF THE DISCLOSURE

A high transmittance glass sheet is provided that is formed of a soda-lime-silica glass composition containing, expressed in wt. %, less than  
5 0.020% of total iron oxide in terms of  $\text{Fe}_2\text{O}_3$  and 0.006 to 2.0% of zinc oxide.  
The glass sheet allows the formation of nickel sulfide particles to be suppressed by the addition of a zinc compound to a glass raw material.
